

CLAIMS

I claim:

1. A computerized image-advancing-display-apparatus comprising:

A flat-panel LCD or Plasma-related display screen with a thin and durable housing surrounding said screen having multi-colored and numbered input buttons descending in order on said housing, said housing having a voice recognition sensor on the front of said housing, said housing having a infrared remote sensor, said housing having an auto-run button and said housing having a mini-computer within said housing's structure along with an electric wires that receives and sends signals to and from a computer box or PC and said housing having an adjustable prop on the back of the unit that is hidden when not in use and with a groove on the bottom of said housing that allows the electric wire to leave the unit from the right-hand side or the left-hand side.

2. A portable computer box having memory storage, inputs for memory cards, a standard floppy disk drive, a standard cd-rom drive, a DVDR drive along with USB ports that allow multi-media readers for digital information, an ethernet router port, inputs for a mouse or a switch, computer keyboard input with the option of having a wireless mouse, keyboard and switch

along with an audio input and output source, an internal fan to cool the unit, a power cord for regular household electricity, connecting wires to the display screen that sends and receives signals, a rechargeable battery that takes-over in case of a power failure, an on and off switch and a small light to show that said computer box is on or off along with four rubber feet and a carrying handle for said computer box.

3. A image advancing system that allows the user to scan images and/or use digital pictures the user has created, store those images, arrange those images, edit those images and present those images on the display screen in a sequential order or a random order.
